

# Should you worry about the health of your heart?

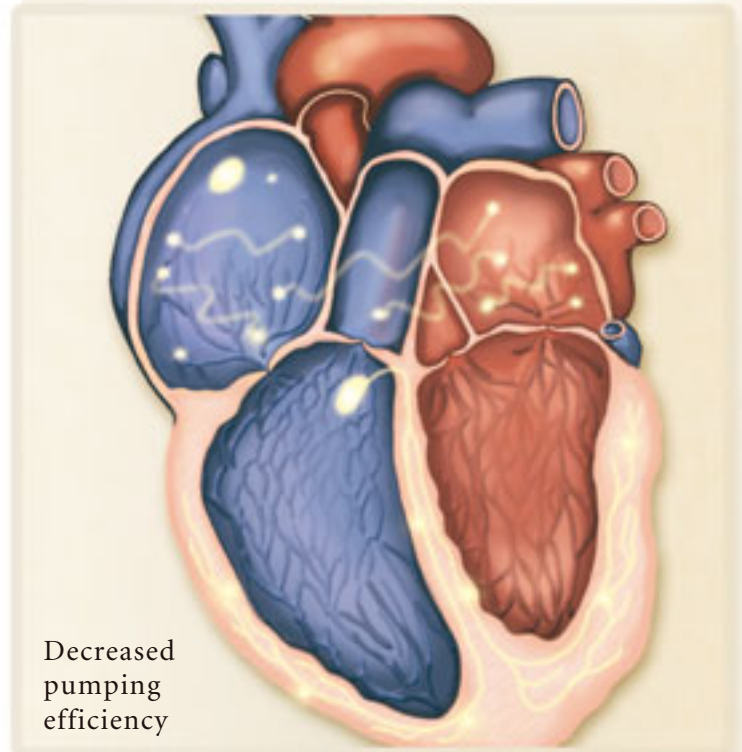

Normal

Vascular

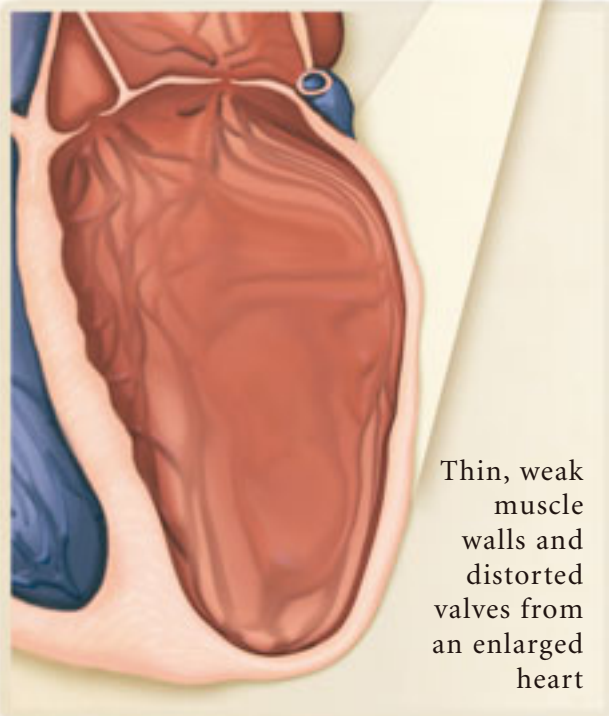

Arterial  
plaquing and  
inflammation

Atrial Fibrillation (Electrical)

Decreased  
pumping  
efficiency

Cardiomyopathy (Muscular)

Thin, weak  
muscle  
walls and  
distorted  
valves from  
an enlarged  
heart

**Cardio-Plus®** or **Vasculin®** (circle one) provide nutritional support to optimize the efficiency of the heart. They both contain bovine heart PMG™ extract, in which naturally-occurring Coenzyme Q<sub>10</sub>, plus all its necessary cofactors, and vitamin B and E complexes are found. These nutrients support the healthy functioning of the heart muscle.\*

Dosage:

---

**Cardiotrophin PMG®** contains bovine heart PMG™ extract, a source of naturally-occurring Coenzyme Q<sub>10</sub>. Coenzyme Q<sub>10</sub> is a vitamin-like substance that is well established in scientific literature as an important nutrient in maintaining healthy cardiovascular function. Cardiotrophin PMG also supports the muscular system of the heart.\*

Dosage:

---

**Cataplex® B** contains components of the B complex that are stimulatory to the cardiovascular and central and peripheral nervous systems.\*

Dosage:

---

**Cataplex® C** helps support the circulatory system by the formation of healthy blood cells.\*

Dosage:

---

**Cataplex® E** helps support muscular regeneration by increasing cellular activity and the repair rate of the cell membranes.\*

Dosage:

---

**Cataplex® E<sub>2</sub>** contains the vitamin E complex, which is known for its ability to reduce oxygen consumption of heart and skeletal muscles. It may also increase the oxygen-carrying capacity of the blood.\*

Dosage:

---

**Cataplex® F Tablets** is comprised of essential fatty acids plus vitamin B<sub>6</sub> and iodine. It supports the metabolism of fats and calcium, and their successful diffusion into tissues.\*

Dosage:

---

#### Instructions:

---

---

---

**Cataplex® G** contains components of the B complex that are calmative to the cardiovascular and central and peripheral nervous systems.\*

Dosage:

---

**Cyruta®** helps encourage blood flow through the circulatory system through its lipotropic effects or actions that promote the transportation of blood fats.\*

Dosage:

---

**Folic Acid B<sub>12</sub>** contains folic acid, which works to reduce levels of homocysteine in the blood to sustain normal levels.\*

Dosage:

---

**Organically Bound Minerals** contains kelp and alfalfa, which provide potassium. Potassium helps maintain healthy blood pressure within a normal range. It works in concert with sodium to maintain a healthy water balance in the body.\*

Dosage:

---

**Soy Bean Lecithin** contains soybean lecithin, a phospholipid that is converted by the body into choline, which is essential in effectively metabolizing cholesterol. Lecithin also normalizes homocysteine levels in people who have elevated blood homocysteine.\*

Dosage:

---

**Tuna Omega-3 Oil** supplies two important omega-3 fatty acids, EPA and DHA. Supportive but not conclusive research has shown that EPA and DHA may reduce the risk of coronary heart disease. EPA and DHA also help support healthy circulation and help maintain regular heart rhythm.\*
