Digestive concerns affect over 50 million Americans each year, many of whom require a visit to a health care professional. Many digestive concerns involve a reduction in the level of digestive enzymes that are endogenously being produced. Supplementation may be needed as people age; declining levels of gastric acids and pepsin — an enzyme that breaks down protein — can contribute to dysbiosis and a rise in challenging organisms.

### Gastric pH Support

Hydrochloric acid (HCl) helps maintain a low pH in the stomach and plays important protective roles in the GI tract both for the absorption of nutrients and protection from the external environment through sterilization of substances.

### Enzyme Support

Supplemental enzymes support macronutrient digestion.

The **great majority** of the raw plant ingredients used in our products are grown on our organic and sustainable farm.

**Freshly picked crops** are often processed within a day to maintain vital nutrients.

We harvest more than **6.5 million** pounds of ingredients on our certified organic and sustainable farm.

**Healthy Soil. Healthy Planet. Healthy Lives.**

Standard Process is a family-owned company dedicated to making high-quality and nutrient-dense therapeutic supplements for three generations.

We apply a holistic approach to how we farm, manufacture and protect the quality of our products. This comprehensive strategy ensures that our clinical solutions deliver complex nutrients as nature intended. It’s how we define the whole food health advantage.
